🌐 <https://www.linkedin.com/in/masoudshayan>

Seasoned software developer with over 10 years of hands-on experience in designing, developing, and maintaining complex software solutions for financial systems with the Java tech stack. Focused on helping businesses, especially those in the banking industry, untangle problems and simplify processes for improved user experiences.

Experienced in team management, with a demonstrated ability to lead and motivate software development teams to achieve project milestones and deliverables. Excellent communication skills and a collaborative approach to problem-solving, fostering a positive and productive work environment.

Passionate about continuous learning and staying at the forefront of technological advancements. Eager to embrace new technologies and methodologies to enhance software development processes and deliver optimal solutions. Excited to bring my skills and expertise to a company that values growth and innovation.

Skills

Work Experience

Deutsche Bank

2024 Sep – present | Bucharest, Romania

Senior Software Engineer

- Contributed to the development and optimisation of banking infrastructure software, focusing on app-distribution automation tools to streamline and simplify other software's build process.
- Modernized the app-distribution automation tools with a distributed architecture using new technologies to: resolve issues more quickly, scale dynamically with workload, monitor user requests through logs and traces, and resolve interprocess bugs and issues by using updated dependencies and libraries.
- Built a CI/CD pipeline to configure, build, test, and deploy Docker images of newly modernized app distribution automation tools for shipping code to the production cluster environment.

KPP

2022 May – 2024 Apr

Senior Software Developer

- Decentralized a large social banking platform to a multi-tenant message-based system, we seized the opportunity to replace oversized servers with significantly smaller ones. This strategic move resulted in an impressive 29% reduction in infrastructure costs.
- Revamped a corporate banking system by leveraging the capabilities of microservices, including containers, service mesh, service discovery, and API gateway. This modernization effort aimed to enhance reliability, fault tolerance, and agility within the system
- Componentized duplicate parts of different products and started meaningful versioning on them.
- Replaced Apache Zookeeper distributed lock feature with database resource lock and reached a 34% increase in performance in the write operations.

Software Developer

- Collaborated on the design and development of a robust, high-performing, and scalable system for seamless communication with the central platform of a stock exchange organization. This system empowers users to efficiently purchase shares and manage their portfolio, offering features such as wallet ownership and credit management. The development process followed an agile methodology to ensure rapid and adaptive delivery of the solution.
- Revised the architecture of the users' portfolio credit services to achieve an availability of 95.5%. While prioritizing stability, the focus shifted towards ensuring the system's availability, even at the expense of strong consistency guarantees. This adjustment aimed to enhance the overall reliability and performance of the credit services, providing users with a seamless experience.

Viramond

2020 Jul – 2021 May

Software Developer

- Developed already existing e-commerce projects around operating advertising and exhibition systems and customer attraction and improving customer experience
- Initiated efforts to transition software launch processes from traditional approaches to faster builds, shorter feedback cycles, and simplified pipeline maintenance. This transformation resulted in a significantly accelerated development process, reducing development to delivery steps by a notable 18%. By implementing these improvements, the organization achieved greater efficiency, enabling quicker turnaround times and enhanced productivity throughout the software development lifecycle.

Rahkar Research Group**Senior Software Developer**

2017 Sep – 2020 Jun

- With the help of a larger team, we improved our newly designed fraud detection system with cutting-edge technology tools that significantly improved the system's adaptability, making it 45% more pluggable in detecting new and emerging fraud cases.
- Developed an innovative product centered around an event alert system and a secure notification broadcast system. The event alert system was crafted to deliver real-time notifications to users, keeping them informed about important events, updates, or emergencies. The creation of this innovative product showcased our commitment to enhancing public safety, streamlining communication processes, and providing a reliable solution for event management in various industries.

Software Developer

2016 Feb – 2017 Sep

- Redesigned a legacy fraud detection system in the banking industry to be more flexible in detecting different scenarios
- Resolved performance issues in cross-banking transaction batch processing by harnessing the multi-threading capabilities of the programming language. This optimization resulted in a noteworthy 22% reduction in time required to complete the processing tasks. By utilizing multi-threading, the system achieved improved efficiency and streamlined batch-processing operations, ultimately enhancing overall performance and timeliness.

Sharif University of Technology

2015 Jul – 2015 Dec

Software Programming Instructor (part time)

- Delivered comprehensive Java SE training to a group of enthusiastic learners who were passionate about pursuing a career as a software developer. Designed and conducted engaging lessons that covered the fundamentals of Java SE, including core concepts, syntax, object-oriented programming principles, and practical application development.
- Nurtured a supportive and collaborative atmosphere, offering personalized guidance and mentorship to help students overcome challenges and excel in their learning journey. Monitored individual progress and adapted teaching strategies to cater to diverse learning styles and abilities.

Arvij Software Group

2013 Aug – 2015 Dec

Android Developer

- Developed and delivered three distinct Android applications, including a file manager, a classified advertisements platform, and a video-streaming app.

- Developed customized Android components tailored to various projects, showcasing the unique branding persona of the company. These customized components, including the action bar, view control, video player, and image picker/slider, were designed and implemented to ensure consistent and cohesive visual representation across multiple applications. By utilizing these branded components, the company achieved a distinct and recognizable user experience while maintaining a unified brand identity.
